Active Directory Domain Migration Checklist

ADUM Active Directory Migrator

Before beginning an Active Directory migration, a number of mandatory requirements are needed to be in place in order to complete the migration successfully. These requirements are standards to meet both the requirements for Microsoft Windows migration and the ADUM Active Directory Migrator.

Throughout this document, the terms source domain and target domain mean the domain from which the objects are being migrated from and the destination domain being where the objects are being migrated to.

Requirements Prior to ADMigrator Installation

Windows Trust Requirements

- ✓ Establish a two way trust relationship between the source domain and target domain
- ✓ Verify the trust relationship – To verify, check that you are able to list accounts from each domain in each domain
- ✓ Add the source domain's Domain Admins group to the target domain's Administrators group
- ✓ Add the target domain's Domain Admins group to the source domain's Administrators group

Windows Password Migration Requirements

- ✓ In the target domain check and verify that the domain Password Policy is equal to or less restrictive then the source domain's password policy.
- ✓ In both the source domain and target domain, enable Account Management Audit for success and failure at both the domain level and the domain controller level. You must reboot the PDC emulator for the policy to take effect.
- ✓ Verify that Account Auditing is working in each domain. Create a test user and delete the users. Check that each event has been recorded in the security logs.
- ✓ In the source domain create a domain local group with the NetBIOS name of the domain followed by three dollar signs with no members. Example DOMANNAME$$$
